

# LASER HAIR REGROWTH

## Regrow Lost Hair

Laser Hair Therapy uses a non-thermal low level laser light that is applied to the scalp and hair. The result is a restorative reaction that clears the debris for the hair shafts, swells the cortex and closes the cuticles, leading to healthier scalp. This enhances hair that looks and feels softer, thicker and shinier and is more easily managed. Laser Hair Therapy treatments also provide an excellent environment in reducing problems such as excessive oily to dry scalp, dandruff and itchiness. Laser hair Therapy is the long anticipated technology for the latest refinement in preventative hair care for men and women.

### *Before & After*

*Before*

*3 Months*

*6 Months*

## What are the Benefits of Laser Hair Therapy?

- Thickens Existing Hair
- Fuller-Thicker-Healthier Hair
- Stops the Progression of Hair Loss
- Improves Scalp Disorders(eg. psoriasis)
- Improves Hair Shaft Quality
- Repairs Thin, Over-Processed or Chemically Damaged Hair
- Helps Repair Split Ends

## Are You A Candidate? yes if you have experienced:

- Fine, limp or thinning hair
- People with scalp disorders
- People experiencing hereditary male/female pattern hair loss
- Hair loss due to stress or medications
- Chemocally damaged hair
- Menopausal changes
- Postpartum changes
- Alopecia Areata
- Hormonal hair loss
- Chemotherapy

## Is laser Hair Therapy Safe?

This low level laser is safe, noninvasive and has had no known side effects. It does not burn, cut or damage the skin in any way. Laser Hair Therapy works on all hair types. It's safe and complies with FDA Laser Safety Standards.

## Treatments: How Long and How Often?

Each laser session lasts for 15-20 minutes and is given twice weekly. The number of treatments is determined by both the extent of the hair loss and the condition of the hair. The length of time varies with each individual.

## FDA Approves Laser for Hair Growth

In January 2007 the FDA cleared the first and only device in history to re-grow hair, the HairMax laserComb.

- Effective on 93% of subjects between 30 and 60 years of age
- Grew an average of 19 new hairs per centimeter
- Results were obtained in 6 months
